Proton x Devoteam | CRM System Update - Transcript

00:00:00

Caroline KRISTANTO: uh already complete Rafael and team. So maybe uh like per our previous discussion this session uh we will use this session to run through every every details and also to answer uh your uh requirement so far. But uh again uh feel free if you have like any feedback or any suggestion about it because uh what we will present today is

Yuda Adi PRATAMA: Hey,

PRO-NET: What

Caroline KRISTANTO: uh for the demo and also uh yeah for the demo

PRO-NET: the

Caroline KRISTANTO: first if you want to proceed like for the prototyping and something like that we can we

PRO-NET: f***? All

Caroline KRISTANTO: can discuss after this one but but you can check first uh about what we have built. for Proton exclusively. Okay. So,

PRO-NET: right,

Caroline KRISTANTO: yeah. So, maybe Yuda. Oh, back to you.

Yuda Adi PRATAMA: Okay, thank you. Uh let me present uh first the

PRO-NET: be careful.

Yuda Adi PRATAMA: the CRM. Yeah, we have uh custom built the CRM.

00:01:13

Yuda Adi PRATAMA: Yeah, as uh as per today and try to meet your uh requirement on and also the process flow. So in this uh in this demo I think I will show the entire screen. Okay. So yeah, this is the demo. Yeah. Uh for the CRM itself. So in the you know in the inbox yeah uh you can you can set uh any previously we don't uh present any suggest a reply uh related with the knowledge basis and also summarization of the conversation and also the ask the copilot. So let me try to uh use this one.

PRO-NET: Uh you know before can I just ask a simple question? Uh can we change this uh background to white? It's easier for us to see.

Caroline KRISTANTO: Oh, the background the the color.

PRO-NET: Yes. Yes. Yes.

Caroline KRISTANTO: Oh,

Yuda Adi PRATAMA: the running or not take some.

Caroline KRISTANTO: okay. Yeah. Can

Yuda Adi PRATAMA: Yeah, I think it's it's it's kind of internet issue.

00:02:26

PRO-NET: Yes.

Yuda Adi PRATAMA: Sorry. Sorry. Let me refresh the uh CRM first. Ah, okay. Okay. So, in this case, let's try to uh suggest a reply.

PRO-NET: Uh this this Freeman.

Yuda Adi PRATAMA: Yeah.

PRO-NET: to the white background or

Caroline KRISTANTO: Yeah.

PRO-NET: white

Caroline KRISTANTO: Okay.

Yuda Adi PRATAMA: Sorry. Oh, that wait.

PRO-NET: the white.

Yuda Adi PRATAMA: I never do that previous. Oh, okay. This one. Uh, change appearance. A light. Oh, so bright.

PRO-NET: Okay.

Yuda Adi PRATAMA: So bright. Okay. Okay. Uh let's continue. Is it uh okay uh with this view or I need to zoom?

PRO-NET: Uh, it's

Yuda Adi PRATAMA: Okay, it's fine. Sure. Uh okay.

PRO-NET: fine.

Yuda Adi PRATAMA: So in this case uh we uh already integrated yeah uh with the suggest a reply summarization of the conversation and also ask the copilot. So basically in this uh in this wait no not showing oh no error let me refresh it again.

00:04:02

Yuda Adi PRATAMA: So basically we we have integrated it uh so your human agent can easily use uh the features yeah like suggest uh reply based on our knowledge basis and also we can also summarize the conversation. Yeah. uh and it's uh become into uh private note. Yeah, in this case uh here's the summary of the conversations. Uh let me know what you think what you think about this. So let's add the note uh for our internal uh notes here. Uh and for the reply uh we can suggest a reply basically in this case uh because it's not really have uh any conversation. Yeah. uh uh in the above. So I think nah it's kind of uh simple uh uh reply from the uh AI and also we can ask the copilot basically but it's not showing at the moment but it's kind of uh there's a sidebar letter in the ask copilot so you can uh ask uh whether it's uh related with knowledge basis or maybe with related with the customer itself.

00:05:19

Yuda Adi PRATAMA: And now we have also button to see the contact. Yeah. Of the customer. Yeah. Uh the conversation actions who will assign uh assign uh the agents and also if there is any uh conversation information, contact informations and also previous uh conversation. Yeah. If any. So we can see uh the historical of the uh customer uh in here. So in this case, yeah, you can see the previous conversation. Yeah. Uh I do a lot uh conversation previously. ly uh using my WhatsApp. So you can see the informations. Yeah. Uh like a number uh name and also the phone number.

Uh you can edit or maybe you can merge the contact uh if there's an double uh contact something like that. And and also in this case we can use uh we can also add like persona. Uh in this case we still use the default one uh for the persona.

00:06:23

Yuda Adi PRATAMA: Uh basically you can use this one as uh like uh sales uh agents or maybe uh uh sales agent maybe the support agent or maybe the operational agent something like that. So this is just uh a new assistance and also I pro we provided like a new entry for uh Eevee uh maybe this one is just uh a sample. Yeah. But basically you can enter the questions the answers uh for uh the knowledge base. So we can uh so we can ingest yeah uh our FAQ in this uh uh menu. But this one is still uh manual. Yeah. Uh you should type the question and answers uh the keyword and also the text. But later on uh I we we think that we should have like a bulk upote like you have the CSV file or something like that you can uh upload it into this FAQ. And the next one is for the document. Uh for this one is still not have like uh uh any upload button.

00:07:34

Yuda Adi PRATAMA: Yeah. Uh but the upload button is here but it's still uh not found at the moment. So in the document we uh we gather the information from the from your uh website and then we put it into our vert.xi search and we uh insert it into our uh CRM. Uh you can use the demo for the uh sorry the playground. Yeah. Uh to use uh answering and try to uh make sure the knowledge base is already integrated or not. You can add the scenario. Yeah. Uh in this case and then inboxes also. Yeah. Uh this one uh summary or maybe like we have uh integrated with the website willio uh for the for the WhatsApp and also the API.

PRO-NET: Somebody

Yuda Adi PRATAMA: Uh so we can see the knowledge inboxes and then uh yeah you can also add the custom tools but this one it's kind of if you have like uh API yeah uh you can use your DMS or maybe uh any internal tools.

00:08:48

Yuda Adi PRATAMA: Yeah. Uh related with the API key, sorry, with the API endpoint, you can use this want us uh your uh tools as well. But for these tools uh I'm not uh testing yet. Yeah. Uh it's still uh mock at the moment. But yeah, we can try it using your uh DMS or maybe any other API. And the setting one is the assistant persona. Yeah. Uh this one is the default one. Yeah. Uh if we have more than uh one persona uh yeah we can uh setting up uh each of the persona uh itself uh we can also have like system instruction whether it's uh for uh operations team yeah uh doing something and then for the technical support so on so forth and we can choose the temperature as well.

PRO-NET: Wow.

Yuda Adi PRATAMA: Yeah. Uh so the more uh temperature that we set it's more creative uh the AI to generate something and also we can use uh we can add like uh ground weather uh rules uh response guideline and also the uh messages uh as well.

00:09:59

Yuda Adi PRATAMA: You can uh simply uh add yeah the information here and for this one you we still use the J 2.5 flash and also the setting up yeah we can set in our env uh basically or this one is not enabled yeah by default for the assist and compilot also yeah let's uh save it's already override and And uh the next one is uh report. Yeah. Uh basically the chat would uh provided the report. Yeah. As you can see, it's uh already there in this case. But uh in your current in your current uh CRM requirement, you want to integrate it with the uh PowerBI, right? So I think we can uh collect the data put it into our bigquery and also uh we can put it in uh PowerBI like that but you can also use this as uh your uh native uh native report. Okay, I think uh for this one I will show you next one is the the features yeah related with the inbox uh because we integrated with the API the WhatsApp and also the website uh I will show you one of them uh for the WhatsApp.

00:11:20

PRO-NET: Overall,

Yuda Adi PRATAMA: So basically in this case we can uh upload yeah the avatar and also uh help center if you have but in this case we don't have it. Uh also conversation routing we have uh options and sorry some options uh whether we can create the new conversation or we can reopen the same conversation. But in this case uh we want to if the ticket already resolved and then we can create the new conversation for the new users and then in this case also we enable the channel greeting. Yeah, as you as you mentioned in the AI trigger uh the WhatsApp flow. Yeah. So we can add the disclaimer uh in this case. And then the next one is collaborator. Uh you can set uh many as many agent as you want uh into this uh WhatsApp. Yeah. Uh you can update it and also the conversation uh assignment by default it's already uh there. Yeah. The behavior uh earliest created conversation first and also the round robin distribution.

00:12:37

Yuda Adi PRATAMA: But we can also use uh custom one. Yeah. In this case uh you can set the primary uh uh channel is what? Yeah. And also you can choose uh uh the other uh channel as well.

PRO-NET: All

Yuda Adi PRATAMA: So you can save it uh so later the agent can serve not only WhatsApp but uh social web and all uh also can handled by the agents. Next one uh we can set the business hour. So yeah, in your uh current uh uh flow, yeah,

PRO-NET: right.

Yuda Adi PRATAMA: we should uh have like out like message.

PRO-NET: Thank you.

Yuda Adi PRATAMA: Uh in this case, we put all of the text here and then select the time zone because yeah, currently we are in Jakarta. So we put in Jakarta. Uh and

then we can set the availability for the uh for the channel itself. Uh for this one this we uh trying to demo and then next one it's for uh inactivity and auto close.

00:13:45

Yuda Adi PRATAMA: Yeah, basically you can use uh this one uh auto close for the inbox and you can set the methods for each of them and then you can set the minute of the uh idle itself. In this case uh I'm yeah because it's a demo. We set the warn

PRO-NET: Hello. Hello. We cannot hear

Yuda Adi PRATAMA: It's 2 minute and out of hours 2 minutes and also resolution confirm gra is 1 minute.

PRO-NET: you.

Caroline KRISTANTO: Uh,

Yuda Adi PRATAMA: Hello.

Fauzal Atmodirono: Uh you you lost your connection yet.

Caroline KRISTANTO: Here we go.

Yuda Adi PRATAMA: Can you hear me?

Fauzal Atmodirono: You you lost your connection.

Yuda Adi PRATAMA: Hello.

PRO-NET: Maybe just repeat the last uh item you will say

Yuda Adi PRATAMA: Okay. Uh where the last I Oh,

PRO-NET: after idol.

Yuda Adi PRATAMA: the idol.

PRO-NET: Idol.

Yuda Adi PRATAMA: Okay.

PRO-NET: Yeah.

Yuda Adi PRATAMA: So, the idol we can set the the minutes. Yeah. uh related to the idea or maybe the close grace for in business hour and or out of hours also.

00:14:56

Yuda Adi PRATAMA: And this one is resol resolution uh confirm grace. So uh let me show you the uh the sample. Uh wait a minute. I think I need to share the entire screen. Okay. So in this case uh I have done uh testing. Yeah. Uh for this one like uh hello and then the disclaimer is open. Yeah. In yeah directly and then I uh just idling. Yeah. because we start the meeting uh previously and then your chat will close in 2 minutes. Yeah, because I set 2 minutes in the settings. Uh so this one it's uh closed due to inactivity and in case your case response is here or yes or no.

PRO-NET: Sorry.

Yuda Adi PRATAMA: So if I said yes maybe let's try. Yeah, it's uh basically it's resolve uh the uh it's auto auto resolve like uh for the chat. So it's try it's start the new uh conversation uh proton x70 Okay, let's wait a moment because it's pulling the knowledge base.

00:16:52

Yuda Adi PRATAMA: Okay. Yeah, this one is the balumat. Okay.

PRO-NET: Yeah.

Yuda Adi PRATAMA: Uh the specifications and so on so forth and also the link uh related with the X uh 50. Previously I have add the EMAS proton. So let's start with uh have do you have

PRO-NET: Wow.

Yuda Adi PRATAMA: uh any EV uh vehicle? Yeah. Uh previously we use uh Malayu uh or maybe Indonesian. Uh let's start with the uh English in this case.

PRO-NET: Oops.

Yuda Adi PRATAMA: Okay, it's pulling the knowledge because I I I have added the knowledge last last night. Okay, but in this case uh it's still uh uh answered with the uh you uh but yeah, but it's okay. Uh uh the agent can pull uh the information with the EMAS. Uh I want to test drive. Let's try to escalate it into the human agent but using the uh test drive. So uh it's Yuda.

PRO-NET: Awesome.

Yuda Adi PRATAMA: Oh uh uh five.

00:18:33

Yuda Adi PRATAMA: Okay. No more telephone. Basically the uh the agent already collect the number phone number. Yeah. Uh because we connected with uh WhatsApp. But in this case because we still use the back end the same back end with the uh website. So it's still uh asking the uh phone number.

PRO-NET: You know, I saw a question from uh here.

Yuda Adi PRATAMA: Sure.

PRO-NET: Uh why is it one they didn't change the language according to what we what we uh type?

Yuda Adi PRATAMA: Sorry. Uh mind to repeat again? Uh Rafael

PRO-NET: Uh okay because uh they okay we started in basa and

Yuda Adi PRATAMA: H.

PRO-NET: then we say we want to test drive but uh why why the uh AI doesn't respond in

Yuda Adi PRATAMA: Oh, okay. I think it's uh uh I think it's kind of the prompting

PRO-NET: English.

Yuda Adi PRATAMA: uh technique uh Rafael in the I back end. So because we we use the same uh basically we use the same uh capability like in the website and also the WhatsApp but sometimes it's kind of uh glitch yeah in the back end.

00:19:49

Yuda Adi PRATAMA: So yeah I that's uh that that's what can I answer uh for now but in the production one this should be uh in English.

PRO-NET: I hope

Yuda Adi PRATAMA: Yeah. So if we uh ask in English and then uh the agent will Al agent will answer in English uh so on so forth if it's in Chinese and also answer in Chinese. Okay. Fa, do you have any uh

PRO-NET: Thank

Fauzal Atmodiriono: Yeah, for the agent we can uh tweak later on the prototype session actually so

Yuda Adi PRATAMA: additional

PRO-NET: you.

Fauzal Atmodiriono: we can uh give more context, give more language or give more uh scan testing for this one.

PRO-NET: So, how can you know which one is call or WhatsApp? Uh you just run us through again uh how do we how do we see all the conversations uh and and separated by whether it's from WhatsApp or from Facebook or

Yuda Adi PRATAMA: Okay. So,

PRO-NET: email.

Yuda Adi PRATAMA: uh basically in this uh in this uh chat wood we have uh some categorization.

00:21:16

Yuda Adi PRATAMA: Yeah. Uh like this one is all uh all conversation. Yeah, we can see uh all of the chat sorry all of the tickets. Yeah, in this case uh by filtering the all but in this case we can uh use like uh channel.

PRO-NET: What?

Yuda Adi PRATAMA: So in this case uh I have channel uh uh proton API twopio proton and also website demo. So let's uh use the all uh conversations and yes we can wait there's no active we can see oh sorry this one apply filter okay we can see above the uh conversation related with the uh uh uh from sorry from the website something like that or I mean from the uh Twilio or maybe uh WhatsApp I mean something like that. So we can uh use uh this uh filter. Yeah. Uh as a channel in this case like API uh WhatsApp and also the website and also we can Yes.

PRO-NET: Are you done? Explain explain to us what does it mean by the three channels again.

00:22:31

Yuda Adi PRATAMA: Yes.

PRO-NET: Uh the channel from proton API what does it mean in layman terms to your proton what does it mean to what what does it mean what channel does it belongs

Yuda Adi PRATAMA: Oh okay. Okay. So uh the proton API it's belongs to our back end. So basically because we test it uh using API. So uh uh the channel that we created it's uh API to API services like our back end into the CRM back end. Uh so uh the next one is for the twillio proton. It's from the WhatsApp. Yeah. Uh we yeah we uh use the name of the

PRO-NET: You don't

Yuda Adi PRATAMA: proton uh twillio proton. Yeah. In this case but uh this channel uh belongs to WhatsApp. So any kind of uh WhatsApp conversations we can uh put it into the uh tul proton. And related with the website demo, it's uh from uh our uh from our website.

00:23:37

Yuda Adi PRATAMA: So uh if there's any uh communication or maybe ticket from the website, it uh it will uh came into the website demo.

PRO-NET: Let's say if our responded our call center so the email will pop

Yuda Adi PRATAMA: Okay. For the email itself, for the email itself, it should be in the channel.

PRO-NET: Shadow.

Yuda Adi PRATAMA: Yeah. Uh in this case, but uh we I think I have uh not yet. Uh let me open. Yeah. Uh whether we have the email or not in this case because I'm not yet integrated it with the email. Oh, sorry. Sorry. No, wait a moment. I think we have it. Oh, yeah. No. Uh, for this one is not yet in uh not yet in email uh at the moment.

Yeah. Uh so we still using the API the WhatsApp and also the uh website. But we can also like uh setting up our inbox.

00:24:51

Yuda Adi PRATAMA: Yeah. In this case uh at the inbox to close this panel and then we can use this email. Yeah. Uh because we have to set up our SMTP credentials and also the IMAP. So uh we are not yet uh have that credentials. Yeah, for this one. So it's still uh unlock for for this demo. But you can also use the other uh channel like maybe email. You can use the for tech. This one is my personal email at the agents. Take me there. Okay. So uh conversation uh letter will have the email in this case. Yeah. Uh previously we have three uh but now I have added uh email uh for this one. And then let's go to the email uh inboxes. Yeah. Uh we can use as uh friendly or maybe professional one. Uh because this one is should be integrated yeah with your email.

00:26:02

Yuda Adi PRATAMA: Uh uh.

PRO-NET: Hello.

Caroline KRISTANTO: Hello Yuda.

PRO-NET: Okay.

Yuda Adi PRATAMA: the previous uh WhatsApp

Caroline KRISTANTO: Uh Yuda,

Yuda Adi PRATAMA: uh Yeah.

Caroline KRISTANTO: sorry. Uh can you repeat for the last? Yeah,

PRO-NET: Awesome.

Caroline KRISTANTO: because we lost you again. Hello Yuda. You

PRO-NET: You are you see

Caroline KRISTANTO: done?

Fauzal Atmodirono: You

PRO-NET: you

Fauzal Atmodirono: there.

PRO-NET: the inbox overall I mean

Yuda Adi PRATAMA: Same with the the other inbox. Can uh set Yeah. Hello.

Fauzal Atmodirono: Your connection is your connection is broken

Yuda Adi PRATAMA: Hello.

Fauzal Atmodirono: yet.

Yuda Adi PRATAMA: Yes, my connection broken. Uh I'm I'm just switch uh to the other network.

PRO-NET: Wonder

Yuda Adi PRATAMA: Uh sorry. Sorry. Uh let's continue again. So yeah, related with the email related with the

PRO-NET: this one is a And this is age. How many days? Oh, okay. Okay.

Fauzal Atmodirono: Yes. Continue it.

Yuda Adi PRATAMA: Okay. Okay.

00:28:05

Yuda Adi PRATAMA: Okay. Let me continue. So, yeah, it's the same with the the other channel. Yeah. Uh or inboxes in this uh terms uh of the chat word. So, we can set up our uh inboxes. Yeah. uh like a sender name. Yeah. Because we should configure our uh business name. Yeah. Uh like this one support. Yeah. Just uh save it. And also we can set the collaborators. Yeah. Uh which agent uh should responsibility should responsible uh to uh answer the email and so on so forth. And also we can set the business hour. Yeah, basically it's the same uh like the others. Uh and also we can set the inactivity in this case. Uh if not,

PRO-NET: Is

Yuda Adi PRATAMA: yeah, we can just uh enable this one.

PRO-NET: that

Yuda Adi PRATAMA: So chart also we can do uh like uh doing emoji or maybe the star something like that uh integrated with this uh email.

00:29:08

Yuda Adi PRATAMA: The configuration also. Yeah. Because we need to set up this one. Yeah. uh uh letter in your domain uh related with the IM

PRO-NET: Okay.

Yuda Adi PRATAMA: configurations and also related with the agents. Yeah, you can use this uh Gemini agent uh as the agent B. So I think if we need if we have uh uh some uh some channel yeah the other channel uh that you want to use yeah you can uh simply go to setting and inbox to set up to the

PRO-NET: Sucks.

Yuda Adi PRATAMA: uh channel the other channel like maybe telegram uh line and for the Facebook and Instagram is still uh unable to click because we need to

PRO-NET: It's love.

Yuda Adi PRATAMA: verified our business first. Yeah. In uh meta business.

PRO-NET: Facebook and Instagram will show up in separate channels.

Yuda Adi PRATAMA: Yes, we'll separate. We'll separate and it's already uh assigned uh based on the channel that we use

PRO-NET: Okay.

Yuda Adi PRATAMA: uh whether if we use WhatsApp and then yeah goes to WhatsApp uh Facebook goes to Facebook channel something like that.

00:30:23

PRO-NET: There will be no total summary of this thing from all channels it in one

Yuda Adi PRATAMA: Uh basically we can uh check uh the conversation here.

PRO-NET: glance.

Yuda Adi PRATAMA: Yeah. Uh we can sorry we can stay from this one sorry in the inbox. Yeah. Uh related how many conversation each uh the channel uh like this one. Yeah. uh proton API it's uh four uh two WhatsApp WhatsApp proton it's uh 13 and

then the average response time and then average resolution time the SLA also we can maintain here uh basically and then related with the business hour yeah this one uh the business uh hour yeah the average resolution time it's 6 uh minutes 30 seconds so in the report we can we can

PRO-NET: Okay, we can

Yuda Adi PRATAMA: see uh all of the Turn on.

PRO-NET: When can I check the ticket status? Let's say I want to follow up with the customer. When can I pending cases?

Yuda Adi PRATAMA: Uh, sorry. The questions is if you want to follow up customers.

00:31:36

PRO-NET: Cases.

Yuda Adi PRATAMA: Uh

PRO-NET: Where can I as agent I want to follow up to the all my cases? How where can I check that?

Yuda Adi PRATAMA: I think related with the followup. Uh oh. Oh. Oh. Okay. Wait. uh because it's not uh here at the moment. Yeah. Uh related with your case. I think I need to I need to not first.

PRO-NET: So,

Yuda Adi PRATAMA: Wait.

PRO-NET: so as we understand each uh conversation will actually autogenerate a support

Yuda Adi PRATAMA: Uh

PRO-NET: ticket, right?

Yuda Adi PRATAMA: yes. Yes.

PRO-NET: Okay. Okay. And then for each support ticket we expect to see a dashboard with the details of that ticket. Uh what is what is it regarding who the caller is, what the phone number and what is the status. So is there such a dashboard in here? Hello.

Fauzal Atmodirono: Can you repeat the question?

PRO-NET: Okay. Okay.

Fauzal Atmodirono: Uh,

PRO-NET: Uh for each conversation here, so we we assume that uh the system will create the

00:33:09

Yuda Adi PRATAMA: Okay. Basically for the dashboard is only analytical. Yeah. Uh in this case goodness. Yes. Hello. Sorry. Sorry. It's still uh begging

PRO-NET: support,

Yuda Adi PRATAMA: this.

PRO-NET: right?

Fauzal Atmodirono: okay. Uh,

Yuda Adi PRATAMA: Okay. I think uh yeah. Okay. Yeah. Related with the with that one. Uh basically it's uh uh not yet uh not yet centralized or maybe in dashboard uh way something like that. Uh so in this case uh the only dashboard that we can show uh only the analytical one like the how many conversation how many agents and uh the cases that uh they handle something like that but uh related with the the the one that you mentioned uh earlier I think uh I need to check yeah uh I think yeah I need to check uh first in our CRM but basically we can add uh the features. Yeah.

00:34:16

Yuda Adi PRATAMA: In uh in this uh in this

PRO-NET: Uh let's say I want to get this conversation with this uh number.

Fauzal Atmodirono: Yeah.

Yuda Adi PRATAMA: CRM.

PRO-NET: How can I do this?

Yuda Adi PRATAMA: Sorry, mind to repeat.

PRO-NET: Let's say I want to take this conversation to this vehicle number, right? How can I do how can I do that?

Yuda Adi PRATAMA: Oh, okay. So, you want to uh like a vehicle number? Wait a moment. This one is uh one of the related with the CRM requirement. Yeah. This case is this what you

PRO-NET: Yes.

Yuda Adi PRATAMA: mentioned. Okay. Okay. For for this one we we are not yet uh have like uh customer profile in this case.

PRO-NET: Okay.

Yuda Adi PRATAMA: So this one is related with the customer 360 we uh we will have that menu uh actually in this uh in this CRM uh but uh for this one for this one it's still not available at the moment.

00:35:32

Fauzal Atmodirono: Yeah. So for this one is actually after we integrate with your DNS system or customer 360 system, we can use these

Yuda Adi PRATAMA: Yes,

Fauzal Atmodirono: features.

Yuda Adi PRATAMA: correct.

PRO-NET: So it's just not available in this demo or uh is it not available in

Fauzal Atmodirono: The feet

PRO-NET: the that You have developed so far for other customers.

Fauzal Atmodirono: Uh so it's not available for the data only the features is

PRO-NET: doesn't

Fauzal Atmodirono: there but because we don't have the customer 360 we don't we not yet create the data mockup for the customer 360 including the vehicle

PRO-NET: for you don't have cell phone for email escalation. I just want to check with you. For email escalation, we need to send to both parties but with separate uh conversation. You know, first uh once customer send an email, we need to send acknowledgement, auto acknowledgement to the customer, right? And then what we do is actually the agent will send that we create a case and send it to internal. Can it be done like that without knowing without sending to customer SEC or BCC or trailing of the email?

00:36:50

PRO-NET: There will be two separate emails sending out. How do this system work on that?

Fauzal Atmodirono: Yeah,

Yuda Adi PRATAMA: Okay.

Fauzal Atmodirono: for this one uh need to be custom uh basically. So uh because we already have the IMAP setting and everything, we just need to create the trigger.

Yuda Adi PRATAMA: Yes, correct. Yeah, in this case uh we still have like an example. Let me uh share the screen first.

PRO-NET: So for for that uh that scenario that we described earlier so you can refer to the process flow. So it's indicated in there how we manage the inbound emails from customer the escalation

Yuda Adi PRATAMA: Yes. Yes, that's correct.

PRO-NET: process.

Yuda Adi PRATAMA: Okay. Basically, in the back end process, it's already there uh for this one. Yeah. I think we need to check Yeah. whether it's uh connected or not because uh we still have we we only have uh one agent at the moment. I think uh we need to have uh two or three uh more agent.

00:38:11

Yuda Adi PRATAMA: Yeah. uh related with this

PRO-NET: on on the email itself.

Yuda Adi PRATAMA: one.

PRO-NET: Right? Is the email service uh provided by you or we have to use our own email service?

Yuda Adi PRATAMA: Uh usually it's uh it's using your email services. Uh Rafael, correct me if I'm wrong.

Fauzal Atmodirono: Yes, we'll use the proton email.

PRO-NET: So if we want to uh use your I mean we want you to supply the email service. Is that possible?

Fauzal Atmodirono: Yes, possible.

Yuda Adi PRATAMA: Yes,

PRO-NET: So that Uh,

Yuda Adi PRATAMA: it's a problem.

Fauzal Atmodirono: Uh just let us know your email

PRO-NET: Uh yes.

Fauzal Atmodirono: system.

PRO-NET: So we just uh uh provide you one email address and the and the subdomain.

Fauzal Atmodirono: Yes, correct.

PRO-NET: Yeah.

Fauzal Atmodirono: And the credential too

Yuda Adi PRATAMA: Yes. Okay.

PRO-NET: for the AI. Uh just now you sign a WhatsApp, right? As a as an example, right? Does that create a case or how does it if it does not escalate to it if it does not escalate to real agent human so it's only solved by um AI is there any of number of case created by the AI and closed by the AI.

00:39:55

Yuda Adi PRATAMA: Ah okay. So related that one uh actually we should have like uh one flow uh added. Yeah. Uh because in this case uh we only have uh yeah we we just uh make it in the back end. Yeah.

PRO-NET: Yeah.

Yuda Adi PRATAMA: Related with this uh let me show you the this one. Yeah.

PRO-NET: Yeah.

Yuda Adi PRATAMA: Sorry. Let me show you this. Okay. Let me No, not not this one. Wait. Yeah, let me let me check uh the flow itself. Uh actually we have done that. So basically if uh we uh we follow we follow the uh uh idle something like that. Yeah. So it's uh already uh closed automatically by the agents sorry by the AI

PRO-NET: Oh

Yuda Adi PRATAMA: itself. So but so for this case I think I need to check yeah uh the real

PRO-NET: yeah.

Yuda Adi PRATAMA: uh the real conversations yeah related with that uh scenario.

00:41:07

Yuda Adi PRATAMA: But we have a

PRO-NET: Because from here because I from here it just that a

Yuda Adi PRATAMA: client.

PRO-NET: ticket assigned to life agent, right? So we want to know ticket assigned and closed by the AI. Where can we find that?

Yuda Adi PRATAMA: Yes. This one, this one it's uh yeah, this one is uh one of the sample that you mentions. So in this case uh the user only say hello and then the disclaimer uh come in and also there's no chat uh from the user and it's already resolved by uh the agent itself. I'm not doing the uh the the results uh for this uh case, but it's already in the back end site but I think we need to uh make sure uh the labeling yeah in this case uh that I classified as customer feedback but in this case there's no feedback or maybe the the idle chat uh only the idle chat something like that and this one is added by the agent sorry by the AI because the agent is only uh my name the only UDI is uh the agent is only Udaddy Because we follow this one close due to inactivity and then the cap.

00:42:39

PRO-NET: So when we have that uh customer profile uh module in here uh we can we can uh reference back all this uh conversation and it will uh group under that

Yuda Adi PRATAMA: It's my uh sorry

PRO-NET: customer.

Yuda Adi PRATAMA: uh mind to repeat Rafa.

PRO-NET: So uh once we have that customer profile module so can I assume that if we click on one one particular customer and then all the conversations related to the customer will be grouped uh

Yuda Adi PRATAMA: Yes.

PRO-NET: within or filtered uh under the customer's name or their phone number or the vehicle

Yuda Adi PRATAMA: Okay.

PRO-NET: number.

Yuda Adi PRATAMA: Oh, okay. So, basically you can see in the contact. Yeah. Uh letter. So, in the contact we can see the informations uh about the uh customer contact. Yeah. uh if we connect with your uh 360 but in terms of the conversations we need to uh we need to uh scooping like uh how how you manage the ticket and then uh sorry not how to manage ticket uh how you classify the ticket uh based on what and also uh related with the labels uh also so we can uh routing all of those uh informations into the correct uh labels or maybe the correct uh folder something like that.

00:44:08

Yuda Adi PRATAMA: The category. Yeah, the

PRO-NET: Yeah, I think for now we categorize under the either the phone number or the vehicle

Yuda Adi PRATAMA: categorization.

PRO-NET: number.

Yuda Adi PRATAMA: Okay. Not

Fauzal Atmodiriono: Yes,

Yuda Adi PRATAMA: that.

Fauzal Atmodiriono: this one is like the banking system we use like the CIF.

Yuda Adi PRATAMA: Yes.

Fauzal Atmodiriono: So it's like one ID for the customer but we can use the yeah full name or vehicle

Yuda Adi PRATAMA: Yes. for the

Fauzal Atmodiriono: number or phone number something like that.

Yuda Adi PRATAMA: customer.

Fauzal Atmodiriono: We need to discuss with uh Rafael and the team for that one which ID that we want we want

PRO-NET: Help.

Fauzal Atmodiriono: to group in.

Yuda Adi PRATAMA: Yes. Yes. Correct. But yes, uh later on we can we can uh create some label or maybe folder uh based on your uh preference uh filtering or something like that.

PRO-NET: custom made of the on the left side we have the label. So this is this is uh done by a to all agent or each individual agent need to create

00:45:05

Yuda Adi PRATAMA: Uh we can apply it uh for all the agents or maybe for for the agent

PRO-NET: themself.

Yuda Adi PRATAMA: itself. But in this uh scenario we apply it for all the agent

PRO-NET: Can you go to the knowledge guide?

Yuda Adi PRATAMA: knowledge base. Okay. This one.

PRO-NET: If you sorry if you want to download PDF with pictures

Yuda Adi PRATAMA: Yes. Can but in this case it's still uh not found.

PRO-NET: can

Yuda Adi PRATAMA: Yeah. For the upload uh file but uh we can do uh we can do uploading in this uh knowledge base. So you can add uh like FAQ uh or maybe the feeding uh the agents using the PDF or maybe the uh document. Yeah. Uh any document that you

PRO-NET: the also we in between we don't like to go live by item like

Yuda Adi PRATAMA: want.

PRO-NET: item by line item can it just can we just just download one P with question and answer instead of you make it like question one line answer one follow how does it go the the input method so you can either key in uh under FAQ is you key manually what is the what is the question I want to answer and then for all the others you will upload it under as a document either PDF or image file also does it

00:46:35

PRO-NET: support

Yuda Adi PRATAMA: Uh for for this one is not yet support but later. Yeah, we can separate the uh the image.

PRO-NET: So basically for the knowledge base we only have two categories right one is the attic which we type in manually and that document is we upload

Yuda Adi PRATAMA: Yes. For the document we uh get from uh uh your website.

PRO-NET: Oh,

Yuda Adi PRATAMA: Yeah, basically. And put it into our uh uh database. But later yeah you can add some uh SOP or maybe like uh knowledge basis or maybe product catalog so on so forth in this case yeah uh you can upload file but I don't think

PRO-NET: yes.

Yuda Adi PRATAMA: it's uh working for now. Yeah because we see the we saw the for 404. Yeah not let me try it first. Yeah, still uh failed uh for the upload. Uh basically for the file itself uh we only support the PDF at the moment. Uh but we can uh but we can uh add the the other format.

00:47:45

Yuda Adi PRATAMA: Yeah, like uh image or maybe video. Uh if you want, we can do that as well. This one is just for uh demo. Uh, basically and as I mentioned also uh the FAQ can be uh uh written by yourself uh by the agents uh by the organizations. Yeah. To all of the agents. Uh the third one uh this one is the future uh development. Uh you can use uh FAQ uh seats.

PRO-NET: Yes.

Yuda Adi PRATAMA: Yeah. like uh uh maybe you can upload the seeds uh related to the FAQ the question answer uh using this column uh and the fourth one is uh based on the upload. So if you upload the file uh basically the AI in the back end will

uh classify the questions and answer based on the file. So yeah that but that's uh the future development for this FAQ.

PRO-NET: So means again if we upload file it will convert to like uh just now like this or this we need to upload one item to live

00:48:58

Yuda Adi PRATAMA: Okay for for for this demo it's uh still uh failed yet to upload **PRO-NET:** item.

Yuda Adi PRATAMA: something. So it's not yet integrated. Uh for the FAQ, you should uh uh add uh one one by one uh

PRO-NET: Okay.

Yuda Adi PRATAMA: questions.

PRO-NET: Okay. Go back to the conversation just now. The WhatsApp conversation.

Yuda Adi PRATAMA: Sure. What's up? What's up? Uh maybe the other. Sorry. I think this one should be in all. Yeah. No.

PRO-NET: Okay.

Yuda Adi PRATAMA: Okay.

PRO-NET: If you look at the top there is FQ and FQ. What does it mean?

Yuda Adi PRATAMA: Oh, this one. Yes, this one. Uh so the agent uh human agent can have uh the visibility to add uh the FAQ directly in this uh uh chat and also you can uh see the FAQ that we have uh previously in the knowledge base and related with the FAQ uh assist.

00:50:08

Yuda Adi PRATAMA: Uh this one is uh the suggestions uh related with the uh with the uh customer uh questions. You can copy it and past it paste into this one. Yeah, just as simple as that.

PRO-NET: switch. It's like a button, right?

Yuda Adi PRATAMA: Uh not really uh not really a search button, but this one uh we specify the query based on the last conversations uh for from the customers. So in this uh ticket the the the message the last message uh uh was bangsar. So the query in this FAQ assist is a bansar. Uh so uh the FAQ suggestions uh will supply you some suggestion to reply. Yeah, basically there's two features. Yeah, you can use uh suggest uh reply and also Okay. So, uh is it helpful or not?

PRO-NET: No.

Yuda Adi PRATAMA: Uh guess we still uh like uh matching. Yeah. Uh with the with the uh query from the user for the search for the

00:51:31

PRO-NET: So the FAQ FAQ assist and suggest a reply the same the

Yuda Adi PRATAMA: set.

PRO-NET: same content.

Yuda Adi PRATAMA: Yes.

PRO-NET: Okay.

Yuda Adi PRATAMA: the same

PRO-NET: Okay. Amazing cap capability but uh is it exactly uh the same

Yuda Adi PRATAMA: capability.

PRO-NET: uh the same uh suggestions.

Yuda Adi PRATAMA: Oh. Uh okay. So for the FAQ assist and sub uh suggest to reply, it's still uh different uh but it's still different but using the same uh knowledge base.

PRO-NET: Okay.

Yuda Adi PRATAMA: uh we still separate the we still separate the prompt uh at the moment but I think

PRO-NET: Okay.

Yuda Adi PRATAMA: uh in the future yeah we can uh suggest a reply and also the FAQs it's the it's the same uh prompt something like that uh what are the conversation with this So let me try this copilot. What are the last I think it's uh grounding into our internal data uh related with the customer. So okay the last

conversation uh the ID uh was on July. It was resolved and labeled as category feedback.

00:52:57

Yuda Adi PRATAMA: Uh to imply no. Uh how about he must let me let me try this uh copilot. Yeah. Okay. Okay. But uh I couldn't find uh find any uh how to find information. 7.

Fauzal Atmodirono: Yeah, the data is not yet grounded yet. Yeah, for this one, uh this is because the data is not yet grounded to this copilot actually.

Yuda Adi PRATAMA: No.

Fauzal Atmodirono: Yeah. Yep.

Yuda Adi PRATAMA: Hello. Yeah, I'm reconnect again.

Fauzal Atmodirono: Yeah.

Yuda Adi PRATAMA: Sorry for that one. Uh, what did I miss?

Fauzal Atmodirono: Yeah. This one is because the data not yet grounded.

Yuda Adi PRATAMA: Oh yeah yeah yeah sure. Uh let me check uh later in the setting related to the copilot. Uh it should be there uh as uh the specification because we try to ask uh the WhatsApp yeah WhatsApp agent about the imas 5. It's there the specifications but uh in this case uh he couldn't find anything.

00:54:51

Yuda Adi PRATAMA: Yeah, some need improvement. Uh, I guess. Okay. Uh, what else? Yeah. What else for? Uh, do you have any uh

Fauzal Atmodirono: Yeah,

PRO-NET: Uh,

Fauzal Atmodirono: I think for I think for this one we can

Yuda Adi PRATAMA: addition?

Fauzal Atmodirono: go to Caroline uh about the prototyping. Caroline, you want to discuss about that one?

PRO-NET: Uh just another question. Sorry. Another question.

Yuda Adi PRATAMA: Sure.

PRO-NET: Yeah.

Fauzal Atmodirono: Yes. Yes. Yes.

PRO-NET: Asian priority.

Yuda Adi PRATAMA: Sorry. Mind to repeat?

PRO-NET: Asian priority just to us, right?

Yuda Adi PRATAMA: Oh, okay. Agent priority. Okay. Sure. Uh related with the agent priority, we can set up uh uh basically it's already uh uh there in the features. So we can use the earliest created uh conversation first or maybe using the roundrobin distributions.

PRO-NET: There'll

Yuda Adi PRATAMA: This one is default uh default uh assignment rules for the agent itself and we can enable or maybe disable these uh features.

00:55:57

PRO-NET: be that.

Yuda Adi PRATAMA: But uh in the other case we can also uh use the agent channel priority in this case like for example we have the UD agents uh the primary channel uh for example yeah let's say the uh WhatsApp but also this agent can handle the other uh channel so we can save

PRO-NET: So we need to say parenting Asia will be WhatsApp, second will be email, third social and fourth will be it. I see.

Yuda Adi PRATAMA: Yes, correct. Yes. Uh for for this one uh basically the primary channel it's the pri the first priority that

PRO-NET: Yeah.

Yuda Adi PRATAMA: this agent should uh handle. Yeah. Which is the WhatsApp. But for the uh the other uh channel uh like email,

PRO-NET: Okay.

Yuda Adi PRATAMA: social and web, it's kind of if the inquiry uh uh came into our CRM and assigned into the agents I think for this one it's still uh not really prioritization. Yeah. Uh whether uh I mean uh I mean the back end can choose uh the the available the available agent at the moment.

00:57:11

Yuda Adi PRATAMA: Uh and also using this uh rule uh for the assignment uh rules uh for the email, social and web agent.

PRO-NET: Sorry. What is the meaning of earlier created conversation for

Yuda Adi PRATAMA: Okay.

PRO-NET: us?

Yuda Adi PRATAMA: So this one it's uh related if the someone uh maybe the user uh chat uh into the human agent uh the created conversation first uh like this one. So if we uh see the see the open uh okay I think I need to I need to try again. Uh let me Hello. So usually it's uh unassigned at the moment. Okay. Uh uh agent. Yeah. Okay, wait a moment. Okay, so this one is already mine. Not uh not assigned uh not unassigned anymore. So that that's the meaning of the conversation. Uh first sorry uh what else sorry I forgot the I forgot the terms. Yes earliest created confession first. So this one is uh sorry this one is uh auto assign uh to the agents based on this one earliest credit notification first.

00:59:11

Yuda Adi PRATAMA: As you can see, uh I I used the other number. Yeah. Uh for this one, uh and it's already mine uh for the uh ticket.

PRO-NET: We need select either one, right? It's either conversation or rob.

Yuda Adi PRATAMA: Uh it's default. Uh if we have a lot of agents so it will be uh a round robin uh for the auto assignment it can be that uh as well.

PRO-NET: Except for a lot of How would like uh if there are many sorry how many uh ticket perians that they can receive for Robin right is there

Yuda Adi PRATAMA: Okay.

PRO-NET: any is there any invitation tickets for agent or WhatsApp

Yuda Adi PRATAMA: Okay. Okay. I think I need to check. Yeah. Uh for the integ for the the the for the

PRO-NET: Yeah.

Yuda Adi PRATAMA: limitation. Yeah. Related with that one. Because in this case uh the default assignment rules are by default uh yeah by default uh assigned by the uh by the back end of the GRM.

01:00:37

PRO-NET: Thank you.

Yuda Adi PRATAMA: I need to check uh the limitations uh related with that one. Thank you. Thank you.

PRO-NET: Is is that is this the setting something that we can we can tweak or is it's uh fixed

Yuda Adi PRATAMA: Good question.

PRO-NET: already?

Yuda Adi PRATAMA: Uh yes you can uh yes you can tweak uh later on. So I think we need to check the limitation that we have for now uh how the what what what how much the maximum uh limitation something like that and then we can uh try to uh uh configurable yeah in this uh console. So it's it's more like this one. Yeah. inactivity and auto close. Basically, it's uh the feature is not there but we uh add the features. Yeah, in this case you can add the uh the text. Yeah, for the auto assign to uh agent or maybe the auto close something like that and also integrated and also with this uh idle minute something like that we can set up it uh later in this case.

01:01:44

Yuda Adi PRATAMA: Thank you Rafael.

PRO-NET: Let's say I'm alien right um already assigned to do my task handle call and also set let's say I change my status to let's say uh follow up my red color follow up is the still coming to the

Yuda Adi PRATAMA: Okay. Okay. Okay. Uh I think related that one it's still in the all conversations. Yeah. uh for this one. But I think the filtering uh should be in uh all to see. Wait,

PRO-NET: I What I learn is they said we need to put our status available only we can receive the

Yuda Adi PRATAMA: Fer.

PRO-NET: conversation right if if you change your status to let's say a toilet break or maybe like lunch you're unable to receive the ticket

Yuda Adi PRATAMA: Yes. Correct. Correct. Because this one it's Uh you can set the availability and also sorry uh you can set the mark as offline uh automatically if you are not using the app but related with uh that one like a toilet brick something like that uh I think we need to uh add yeah uh in this case uh for uh maybe busy or maybe the offline but if you have like any other uh any other uh status that you want to add then uh we can uh at in this uh availability.

01:03:27

Yuda Adi PRATAMA: Thank you

PRO-NET: So as I say this green are not available.

Yuda Adi PRATAMA: for

PRO-NET: I will receiving call or WhatsApp synthe.

Yuda Adi PRATAMA: sorry for the

PRO-NET: Let's say my status is available and I'm handling call and WhatsApp on that day.

Yuda Adi PRATAMA: offline.

PRO-NET: If my status is too online, right? I will receive these two uh convers call and also WhatsApp together or how

Yuda Adi PRATAMA: Uh okay. So it's kind of the auto assignment. Yeah. Uh uh related with the auto assignment as I mentioned earlier. So the primary is uh the WhatsApp. Yeah. For example. Yeah. In this case. So uh uh uh agent will uh will

receive the uh WhatsApp first to handle and then after WhatsApp uh been done uh the the agent this agent can uh also handle the other uh channel something like

PRO-NET: How can system have already finished my process?

Yuda Adi PRATAMA: that.

PRO-NET: Already completed the process.

Yuda Adi PRATAMA: Uh, sorry.

01:04:39

Yuda Adi PRATAMA: Mind to repeat? Yeah. Uh, your voice in in mind breaking up. Sorry. Sorry. Sorry.

PRO-NET: How how did your system already completed the

Yuda Adi PRATAMA: Oh, okay.

PRO-NET: WhatsApp?

Yuda Adi PRATAMA: Uh, how completed? Completed. Okay. So, basically the completed it's uh we can see this one uh whether it's completed or not uh by filtering here. uh basically yeah uh we can see is it resolved or not. So if it's uh already resolved then uh we can see uh all of the ticket that already resolved whether it's complete or not they uh just resolve the the terms

PRO-NET: So, so you mean uh you want Okay. You want the round robin to skip if if you are on call. You want the wrong to keep you if you are currently in I'm just afraid that I'm put available right before the authorities call let's say are receiving call so for sure there will be no WhatsApp come to me not Maybe yes.

01:05:55

PRO-NET: Yes. Not sure. But is it you want it to be like that or you don't want it to be like that? Right. Right. Um it can be go to another. Okay. So, so the the I mean what what we are asking is actually uh let's say uh on we have the voice also integrated in here. So maybe uh we will also have the status that uh the agent is currently on the

phone busy on the phone. Are you busy? Right. So if uh is busy and then when the inbound WhatsApp uh

Yuda Adi PRATAMA: Oh.

PRO-NET: comes in it should sweep the agent in the wrong that is that possible to

Yuda Adi PRATAMA: Oh, okay. Okay. Yeah. Uh I think it's something that we can do uh basically. But this one uh as you can see uh for the availability, it's still uh manual. Yeah. to to handle. So later uh for the agent uh if the agent busy then uh yes the agent can do uh their

01:07:02

PRO-NET: Yeah. Yeah.

Yuda Adi PRATAMA: stuff. Yeah. Basically yeah uh and automatically assigned by assign to the other agents.

PRO-NET: Yeah. So basically I think we're talking about phone calls, right? So if the agent is engaged on the phone,

Yuda Adi PRATAMA: Oh.

PRO-NET: uh then the status should automatically change to busy and then the problem should keep the

Yuda Adi PRATAMA: Mhm.

PRO-NET: agent.

Yuda Adi PRATAMA: Okay. Sure. Sure.

PRO-NET: Okay.

Yuda Adi PRATAMA: Uh related with the phone call uh in your current process uh is using the IV area like uh press uh one, press two, so so on so forth. it's still uh we want to use that one uh in the production uh like IVR call this one or use the the conversational way uh way

PRO-NET: What is it? What is it? What is the two again?

Yuda Adi PRATAMA: the Yes.

Fauzal Atmodiriono: Uh so yeah so this is uh this is the different between the

PRO-NET: What?

Yuda Adi PRATAMA: Go ahead.

Fauzal Atmodirono: IFR and within uh with using generative AI for the this one.

01:08:09

Fauzal Atmodirono: So there is uh uh two ways uh for doing this one. The first way is actually using this uh kind of business flow. So it's like you call then you press one and then press two. But uh because we using the LLM because the LLM is already understand the context so we can pass through like the press one or press two. So you can just do the conversation like uh to the human directly. So we don't need to press one or press two. But for this one is it you need to using the same flow for this one.

PRO-NET: I'm not I'm Not sure how this thing work but uh but we are leaning towards using the TW solution which mean we don't use our on the C

Fauzal Atmodirono: So uh if we want to using the press one and press two we need to using the

PRO-NET: line.

Fauzal Atmodirono: twillio actually for the IFR. But if we want to use the directly to the LLM the LLM can bypass the press one and press two network.

01:09:15

PRO-NET: Okay. So, so these two option you're talking about is still sitting on the solution, right?

Fauzal Atmodirono: Yeah.

PRO-NET: Okay. Okay. So um so we need to decide at one point which one we prefer whether it's purely the

Yuda Adi PRATAMA: Yes.

PRO-NET: LM or we use the IV

Yuda Adi PRATAMA: Yes.

PRO-NET: right

Yuda Adi PRATAMA: correct uh which one uh you want to uh execute uh in the production whether it's still IVR or maybe in uh conversational way.

PRO-NET: uh how is the LL works?

Yuda Adi PRATAMA: Okay, let me show you the current demo that we have related with that one.

PRO-NET: Okay.

Yuda Adi PRATAMA: Uh in this case uh we have uh integrated with our knowledge base and Twilio. Uh this one is real uh voice. Yeah. Using the internet call. So let me try. Hello

Yuda Adi PRATAMA's Presentation: Hello. How can I help you

Yuda Adi PRATAMA: Proton X70.

Yuda Adi PRATAMA's Presentation: today? LED screen

Yuda Adi PRATAMA: Uh Ko uh sorry to interrupt.

01:10:36

Yuda Adi PRATAMA's Presentation: infotainment,

Yuda Adi PRATAMA: Uh how about uh the uh security

Yuda Adi PRATAMA's Presentation: Proton X70,

Yuda Adi PRATAMA: features?

Yuda Adi PRATAMA's Presentation: Autonomous Emergency Braking, AEB, Forward Collision Warning, FCW, adaptive cruise control, ACC, D, stop and go, lane keep assist, LKA, then tire pressure monitor, ing system TPMS.

Yuda Adi PRATAMA: I see

Yuda Adi PRATAMA's Presentation: How would you rate your experience from 1 to 5?

Yuda Adi PRATAMA: it's five.

Yuda Adi PRATAMA's Presentation: Thank you.

Yuda Adi PRATAMA: Yeah, that's the example of uh the conversational uh way related with the uh AI support uh by phone. So we don't need to have like press one, press two, uh something like That

PRO-NET: Press one road assistant which uh I can connect to another Uh, how does it

Yuda Adi PRATAMA: Okay. Uh for that one I think we need to check uh in the Twilio.

PRO-NET: work?

Yuda Adi PRATAMA: Basically we have mechanism to to hand over uh to the to the agents but at the at this demo uh we are not yet uh connecting with the real uh agent.

01:12:16

Yuda Adi PRATAMA: Oh, there's no uh there's still a human with the a user with the AI, not a user with the human yet at the moment.

PRO-NET: If the AI cannot answer, it must go to human right. How how it connects to human?

Fauzal Atmodiriono: Yeah. So for this one uh after you call to the uh agent B. So let's say we we can call the agent B layer. Uh the agent B know the context. So let's say if the context is about sales and then if you want to escalate to the human

PRO-NET: Okay.

Fauzal Atmodiriono: agent, the human agent can be the escalated to the sales team. And then for let's say for the repair go to the agent repair something like that.

PRO-NET: Okay.

Fauzal Atmodiriono: So basically when you call the first agent that uh accepting the cost is actually the orchestrator

Yuda Adi PRATAMA: Okay. Uh let me try. Uh

PRO-NET: If the customer 1300 number, it will answer by AI first, right?

Fauzal Atmodiriono: Yeah, the AI will accept first.

01:13:40

PRO-NET: Come

Fauzal Atmodirono: So in the real situation is like someone call and then the

PRO-NET: on.

Fauzal Atmodirono: front desk or uh front liner team is accepting the call and then if they need to escalate to the sales team, the front liner is directly uh is passing through the call to the sales team.

PRO-NET: But what if the customer select RSA as RSA is handled by different team and they given 24 hours. So the AI will direct transfer the line to RS mobile.

Fauzal Atmodirono: Oh, we can set the business hour too.

PRO-NET: Okay. Then you just connect the call to the

Yuda Adi PRATAMA: Yes.

Fauzal Atmodirono: Yes.

PRO-NET: RS.

Yuda Adi PRATAMA: Correct.

PRO-NET: Our agent only available during office hours. But the AI is available 24/7, right? So if the customer call us during night and asking about

Fauzal Atmodirono: Yes.

PRO-NET: the uh asking about the uh vehicle Not only question of extra the AI can answer on behalf of the uh agent,

Fauzal Atmodirono: Uh-huh. Yes, correct.

PRO-NET: right?

Fauzal Atmodirono: They I can answer everything uh as long we have everything knowledge in the our knowledge management.

01:15:10

PRO-NET: But if the customer wants to talk to the live agent, uh uh it won't be connected because office hours is uh at daylight.

Fauzal Atmodirono: Yes,

PRO-NET: But if the customer say that oh my car having an accident so it will direct to

Fauzal Atmodirono: correct. Mhm.

PRO-NET: the road assistant

Fauzal Atmodirono: Yes,

PRO-NET: right

Fauzal Atmodirono: correct.

PRO-NET: understand this is called LN

Yuda Adi PRATAMA: Yes, this code uh using llm method.

Fauzal Atmodirono: Yes. Or we can use the multimodel.

PRO-NET: Okay. For your WhatsApp customer able to send a voice recording text. What was

Yuda Adi PRATAMA: Voice not um voice note for WhatsApp. Uh uh let me check the capability first.

PRO-NET: that?

Yuda Adi PRATAMA: Yeah. Uh since we have the only the demo sandboxing. So the feature is not unlock uh for all uh features basically. Uh let me let us let us check uh for the voice note uh the yeah voice note capability we are just using the text yeah for now. So user will answer in text and then the agent using uh text also.

01:16:55

Yuda Adi PRATAMA: Yeah to answer the user inquiry.

PRO-NET: Because sometimes customer also give us videos right to shows at the car right.

Yuda Adi PRATAMA: Yes.

PRO-NET: So capable the website should have right that

Yuda Adi PRATAMA: Yes.

PRO-NET: function.

Yuda Adi PRATAMA: Yes. Correct. Uh the the functionality is there. Uh I think it's related with the meta should verify our business first uh to unlock all of those uh features uh basically. So I think the yeah the capability yeah we can use the multimodel so we can process the image we can process the video and also audio at the same time. Uh and then yeah related with the WhatsApp uh integrations yeah we need to check uh uh whether in this in the sandbox we can do that or not. Uh, as far as I know, it should be uh verified first uh for the

Fauzal Atmodirono: Yeah,

Yuda Adi PRATAMA: WhatsApp.

Fauzal Atmodirono: actually for the technology wise instead of voice uh actually I think can be using the WhatsApp voice too.

PRO-NET: Oh,

01:18:05

Yuda Adi PRATAMA: Yes.

PRO-NET: but but for it must have uh uh it can be recorded, right?

Fauzal Atmodirono: Yes.

PRO-NET: Yes.

Yuda Adi PRATAMA: Yes.

Fauzal Atmodirono: So everything that in here is actually we have a lock that but for this demo is we not yet recorded everything but for the production yes uh we will need to record everything.

PRO-NET: Go back to the reporting.

Yuda Adi PRATAMA: go back to the report. Let me open it. So this one for the report. Yeah, we can see the overview, the open conversation, the agent status, conversation

PRO-NET: This view there will be a separate view for admin and also

Yuda Adi PRATAMA: traffic.

PRO-NET: leaders and also agent right or agent cannot view

Yuda Adi PRATAMA: Yes.

PRO-NET: this.

Yuda Adi PRATAMA: Uh okay. Uh because I'm the super admin, so I think I need to check uh the capability uh for the agent itself should be some of the report. Yeah. Not all the report. Uh because I'm the uh yes.

PRO-NET: So super angry must can see all download

01:19:34

Yuda Adi PRATAMA: Yes, correct.

PRO-NET: right.

Yuda Adi PRATAMA: But in this case, I think uh I'm the admin or not. Let me check. Yeah, I'm the admin. I'm not the agents. So, I can see uh everything. Yeah. In this uh console. uh for the agent. Uh can can we test it? Let me check. Yeah. Okay. Verification pending. Let me try uh this

Caroline KRISTANTO: I think you can drop down uh Yuda when you create an agent

Yuda Adi PRATAMA: one.

Caroline KRISTANTO: and then you can drop down the role.

PRO-NET: Happy

Caroline KRISTANTO: I think all of that uh depends on the role that you given to the agent, right?

PRO-NET: birthday.

Yuda Adi PRATAMA: Uh yes but in this case uh for the role itself we just have two role at the moment. Yeah like uh agents and uh administrator.

Caroline KRISTANTO: Huh?

Yuda Adi PRATAMA: So uh the the proton team questions are how uh if the assigned team is the agent can they uh also access the report this report uh something like that but yeah we need to make sure uh the the first yeah related with this because Time.

01:20:54

Yuda Adi PRATAMA: I'm the admin of the uh of this uh console. Yeah, not the agents. Okay.

PRO-NET: Uh the report we can customate as what we want, right?

Yuda Adi PRATAMA: Okay. For the for this one uh for the report, it's uh natively uh in the CRM. So we can we cannot uh uh what the we cannot we cannot customize it uh at the moment but we can uh take the data from the database and then we can

pull it into uh PowerBI. But if you want to like uh embed the PowerBI into this CRM also can basically

PRO-NET: Where's your PowerBI? Where is your

Yuda Adi PRATAMA: sorry uh we don't have the PowerBI at the moment.

PRO-NET: PowerBI?

Yuda Adi PRATAMA: Uh the PowerBI uh that I mentioned it's uh it was from your uh CRM requirement that related with the PowerBI uh like this one. Yeah, the system needs to integ. Yeah. Uh but in this case uh we are not yet integrating uh with the PowerBI

01:22:14

PRO-NET: Sorry.

Yuda Adi PRATAMA: or WebBI tools. We use uh the simple uh chart uh JavaScript. Yeah, something like that uh related with this one. But you can add the

PRO-NET: These are the standard reports.

Yuda Adi PRATAMA: Sorry.

PRO-NET: These are the standard reports that you have in

Yuda Adi PRATAMA: Yes, it is under report.

PRO-NET: here.

Yuda Adi PRATAMA: Correct.

Caroline KRISTANTO: for the visualization uh itself. Do you have like any reference how uh how people uh should be visualized or uh how about it uh Rafael and Tim because if you can share uh to us regarding like the example of the visualization that you expected I think uh we can adjust and custom it for you.

Yuda Adi PRATAMA: Yes. Got

PRO-NET: Okay, we will share the report that we have.

Yuda Adi PRATAMA: it.

PRO-NET: Yeah, we can review and see whether it can be embedded into the into this uh UI or we have to

Caroline KRISTANTO: Yeah.

PRO-NET: stick

Yuda Adi PRATAMA: Yes, correct.

PRO-NET: and the report should should because you could have should have by category category means that you have the on the you have the uh anti sales.

01:23:52

PRO-NET: Oh, category. So from that category we want to know on the concern number one, concern number two, the highest, the lowest. Okay. Okay. Okay. Okay. So the yeah I mean some of the reports concepts the case category uh but of course that one I think will tie back to the ticket management the support ticket management we whereby we need to uh file it according to the different uh business department like for example some are sales related and some are after sales related and then after that from there

Yuda Adi PRATAMA: Sure.

PRO-NET: then we will need to have that breakdown uh of the cases based on the categories. Please. So right now what I'm looking at here the category complaint category inquiry uh where does this uh or where do we assign these labels

Yuda Adi PRATAMA: Where do we assign this close?

PRO-NET: the label the category feedback the inquiry

Yuda Adi PRATAMA: Uh oh. Okay.

PRO-NET: Hey,

Yuda Adi PRATAMA: So some some of these categories uh closed by the agent itself uh the AI uh and then it's categorized also by uh the uh AI.

01:25:18

Yuda Adi PRATAMA: Yeah, this one is uh the the example yeah of this uh

PRO-NET: cool.

Yuda Adi PRATAMA: of this uh I mean like the label So want to add something this regard.

Fauzal Atmodirono: Uh,

PRO-NET: So currently assigned by the

Fauzal Atmodirono: not yet.

Yuda Adi PRATAMA: Yes.

PRO-NET: AI

Yuda Adi PRATAMA: Sign by the AI, no complaint. Okay. For the feedback, I think for this one, we need to see all of uh this one.

PRO-NET: Uh so if uh so the AI assigned the category or the labels but we can edit or update right.

Yuda Adi PRATAMA: Yes, you can edit and update the labels uh is here.

PRO-NET: Yeah.

Yuda Adi PRATAMA: So yeah, this one is description I classified. So we created uh I classification uh related with this one. Uh you can add Oh

PRO-NET: I've been on the on the conversation itself. So you go back to the

Yuda Adi PRATAMA: yeah. Yes. Uh related to the conversation uh uh you can uh see Yeah.

PRO-NET: Uhhuh.

01:26:36

Yuda Adi PRATAMA: Sorry. You can uh you can adjust it basically. And this one uh the label in this uh list uh it's uh based on this one. So you have to adjust in the uh label menu first. Yeah. Uh and then uh you can see whether it's show show in the uh sidebar or not and then uh in the conversation the AI will classify it as uh yeah category feedback or maybe the category inquiry and so on so forth.

PRO-NET: Can can you just show one one example? Uh go go back to the conversation.

Yuda Adi PRATAMA: Okay,

PRO-NET: Okay. So,

Yuda Adi PRATAMA: this one second.

PRO-NET: let's say the first one is a category inquiry, right? Okay.

Yuda Adi PRATAMA: Yes.

PRO-NET: How do I change it to complain?

Yuda Adi PRATAMA: Assign label. Yeah. Uh you can check this uh uh complaint. Do you have any complaint? Oh, this one assign is uh but yeah.

PRO-NET: Ah, okay.

01:27:37

Yuda Adi PRATAMA: So in this case, let me open the complaint and let's see. Yeah. Uh whether it's apply or not. Yes, it's apply. origin, high, medium, low and also assign the label. Yeah. Uh assign the uh the agent or maybe the team in this case. Yes, you can do

PRO-NET: Why after you select inquiry

Yuda Adi PRATAMA: that.

PRO-NET: competing. So you can see you want you want to see that you want to see the the the main category and the subcategory in this view. Oh yeah I want so so you look at the the this particular I mean this conversation so right now it has the two categories right complaint and query. Yes. So in in our operation we normally categorize the category or we normally group the

Yuda Adi PRATAMA: Yes.

PRO-NET: categories by is is hierarchy like for example one is uh one is sales and then after that the second level what is it so it should have a dependency on the what is the first category selected and then and then what is the subcategory so uh yeah I mean just to let you know that that is how we Guys, our

01:29:27

Yuda Adi PRATAMA: Okay. Okay. Not that. But in this case,

PRO-NET: cases

Yuda Adi PRATAMA: we just uh put all of all the of the labels. Yeah. Uh for each uh conversations. So like yeah, as you see uh we can uh add the more uh category in this case. But there's no uh uh label and or sub label uh yet. Yeah. At the moment.

But we can also uh adjust Yeah. ISM of how we label uh the conversations uh based on your uh current operation things.

PRO-NET: Once I select one multiple accidentally to contact me or yeah so so that's just just uh confirming background that the I mean how we manage the case categories so there's the main category and the subcategory so of course the main category can only be one one unique uh main category and then after that the subcategory so it cannot be like selecting two main categories

Yuda Adi PRATAMA: Okay.

01:30:47

PRO-NET: So that needs to be customized.

Yuda Adi PRATAMA: Yes, it's uh it can be customized uh later on. Uh,

PRO-NET: Okay.

Yuda Adi PRATAMA: Rafael

PRO-NET: because I think the email uh I I think we we we I mean this the one item that we still would really like to have uh demo is the uh email escalation. Is is that something that uh you can set up?

Yuda Adi PRATAMA: Okay. Sure.

PRO-NET: So, which means that we receive an inform email and then uh

Yuda Adi PRATAMA: Yes.

PRO-NET: the uh operator or the agent can can uh forward the email to the dealers. You you also can follow the SOP the process that already given to you. We want to the process.

Yuda Adi PRATAMA: Yes.

PRO-NET: Can you can the system do that on the email?

Yuda Adi PRATAMA: Okay. Uh so uh we should we should follow this one. Yeah. Uh the escalation policy, right?

PRO-NET: Yes. This is the most important.

Yuda Adi PRATAMA: Yes. Yes. Okay.

01:32:23

PRO-NET: This one process is of the upper

Yuda Adi PRATAMA: Uh okay sure.

PRO-NET: column.

Yuda Adi PRATAMA: uh basically uh related with this one uh I think in the back end uh of the CRM it's already there uh the capability but the in the UI uh in the UI itself uh we lack of the email yeah basically because we should uh use the IMAP uh yeah uh IMAP one Uh, I I think later after this call I will g uh the informations related with the email what we can do and I think for this flow uh basically we can uh we can follow yeah we can follow the flow uh right uh after the this meeting

PRO-NET: Okay, thank you.

Yuda Adi PRATAMA: thank Fauzal any anything to add or Caroline?

Caroline KRISTANTO: Okay. Uh I think uh from my side also clear uh Rafael you the puzzle. So uh basically Rafael and team everything that uh you have mentioned before uh we can try to build it uh for like the exclusive solution for you. So I think uh my recommendation is uh for the next step uh we will compile and tailor uh all of the requirement that we got from you into one solution uh and one proposal and then uh I will bring this proposal to you and also I will bring this to Google too because uh if you remember about the program funding that uh I have mentioned before to you that uh we can utilize the program funding that uh we have with Google from

01:34:25

Caroline KRISTANTO: Proton. Is that make sense?

PRO-NET: Yes. Yes, that sounds good.

Caroline KRISTANTO: M so uh so uh I think this program funding will be very beneficial for you uh especially because uh with this program funding uh it can like cover the cost of uh development or deployment of the solution.

PRO-NET: What is the timeline that you're looking

Caroline KRISTANTO: Yeah.

PRO-NET: at?

Caroline KRISTANTO: Okay. Uh so I think uh for the proposal itself uh what is then? Okay. So for the proposal uh Yuda Fauzal

Fauzal Atmodirono: I think for the proposal we can add the latest next week, same
PRO-NET: Okay.

Fauzal Atmodirono: day.

PRO-NET: And then the the process at your end regarding the Google and all uh that you need to present to them uh normally typically how long will that take? Is it another another two weeks or another month?

Caroline KRISTANTO: Uh no uh actually uh we can do that uh in parallel uh Rafael. So after this call uh me,

PRO-NET: Oops.

Caroline KRISTANTO: Yuda and Fauzal will uh will meeting internally to discuss P about the requirement from your side and then after that uh we will build like a proposal.

01:35:54

Caroline KRISTANTO: for you and alongside with that we will uh I will open discussion with Google and bring uh our solution to them. So it can be two in parallel

PRO-NET: Okay.

Caroline KRISTANTO: but I think after but I think after we create a proposal we need your confirmation also. Uh is it already fulfill all of the expectation uh for now or not from your side?

PRO-NET: Yes. Accept what you think.

Caroline KRISTANTO: Yes. Oh okay. Okay. So uh so may I may I make sure so everything already align with your expectation except email right? Okay. Email, voice note and also image that you mentioned before. Okay. Okay. Glad to know that.

PRO-NET: Yeah.

Caroline KRISTANTO: Thank

PRO-NET: So I think the the basic the basic functions are all covered and then of course the the others will be more on

Caroline KRISTANTO: you.

PRO-NET: the maybe some some adjustment to the UI some more on the

Caroline KRISTANTO: Okay. Okay.

PRO-NET: UX.

Caroline KRISTANTO: Got it. And also uh please share with us the example of the reports that you want to uh have.

PRO-NET: Okay.

Caroline KRISTANTO: Yeah. Okay. I think that's all from me. Uh, how about from your side, Rafael?

PRO-NET: That's all from us.

Caroline KRISTANTO: Okay.

PRO-NET: That's enough.

Caroline KRISTANTO: Okay, cool. Okay, I think uh that's all. Thank you so much. Thank you.

PRO-NET: Thank you.

Caroline KRISTANTO: Bye-bye.

Fauzal Atmodiriono: Thank you.

Yuda Adi PRATAMA: Thank you, Rafael and Tim.

Fauzal Atmodiriono: Bye-bye.

Yuda Adi PRATAMA: Bye-bye.
